### 117TH CONGRESS 1ST SESSION

# H. R. 3517

To amend title XVIII of the Social Security Act to improve access to, and utilization of, bone mass measurement benefits under part B of the Medicare program by establishing a minimum payment amount under such part for bone mass measurement.

### IN THE HOUSE OF REPRESENTATIVES

May 25, 2021

Mr. Larson of Connecticut (for himself, Mrs. Walorski, Ms. Sánchez, Mr. Burgess, and Mrs. Trahan) introduced the following bill; which was referred to the Committee on Energy and Commerce, and in addition to the Committee on Ways and Means, for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned

## A BILL

To amend title XVIII of the Social Security Act to improve access to, and utilization of, bone mass measurement benefits under part B of the Medicare program by establishing a minimum payment amount under such part for bone mass measurement.

- 1 Be it enacted by the Senate and House of Representa-
- 2 tives of the United States of America in Congress assembled,

### 1 SECTION 1. SHORT TITLE.

- 2 This Act may be cited as the "Increasing Access to
- 3 Osteoporosis Testing for Medicare Beneficiaries Act of
- 4 2021".

#### 5 SEC. 2. FINDINGS.

6 The Congress finds the following:

\$95 billion in 2040.

- 7 (1) The total annual expense of providing care 8 for osteoporotic fractures among Medicare bene-9 ficiaries, including direct medical costs as well as in-10 direct societal costs related to productivity losses 11 and informal caregiving, has been estimated at \$57 12 billion in 2018, with an expected increase to over
  - (2) Osteoporosis is a silent disease that often is not discovered until a fracture occurs. One out of two women and up to one of four men will suffer an osteoporotic fracture in their lifetimes.
  - (3) Osteoporosis disproportionately impacts women, who account for 71 percent of osteoporotic fractures, and 75 percent of costs.
  - (4) Most women are not aware of their personal risk factors for osteoporosis, the prevalence of, or the morbidity and mortality associated with the disease, despite the fact that broken bones due to osteoporosis lead to more hospitalizations and great-

- er health care costs than heart attack, stroke, or breast cancer in women age 55 and above.
- (5) A woman's risk of hip fracture is equal to her combined risk of breast, uterine, and ovarian cancer. More women die in the United States in the year following a hip fracture than from breast cancer.
  - (6) One out of four people who have an osteoporotic hip fracture will need long-term nursing home care. Half of those who experience osteoporotic hip fractures are unable to walk without assistance.
  - (7) Nearly one in five Medicare patients die within one year of a new osteoporotic fracture. Beneficiaries with a hip fracture had the highest mortality where approximately 30 percent died within 12 months of the fracture.
  - (8) Bone density testing is more powerful in predicting fractures than cholesterol is in predicting myocardial infarction or blood pressure in predicting stroke.
  - (9) Since 2007, Medicare has cut DXA reimbursement by over 72 percent. By 2019, the payment cuts caused a loss of 44 percent of DXA office providers resulting in declines in expected DXA test-

1	ing, leaving 1.65 million women undiagnosed and
2	untreated for osteoporosis.
3	(10) A decade of steady decline in hip fractures
4	stopped abruptly in 2013. As of 2019, there have
5	been more than 71,775 additional hip fractures,
6	costing almost \$3 billion, leading to almost 16,000
7	additional deaths than expected if the decline had
8	continued.
9	(11) An estimated 205,000 Medicare Fee For
10	Service beneficiaries, or about 15 percent of those
11	who had a new osteoporotic fracture, suffered one or
12	more subsequent fractures within 12 months of the
12	initial fracture.
13	minum macture.
