117TH CONGRESS 1ST SESSION

H. RES. 88

Recognizing women's cardiovascular health as a critical health care priority that affects every State and contributes to increased health care costs, and promoting the necessity of increased awareness of and education on the symptoms for heart disease among women, gender-specific cardiovascular disease research, and policy action to alleviate the risks of heart disease among women.

IN THE HOUSE OF REPRESENTATIVES

February 2, 2021

Ms. Herrera Beutler (for herself, Ms. Roybal-Allard, Mr. Taylor, Mr. Fitzpatrick, Mr. Young, Mr. Bost, Mr. Posey, Ms. Norton, Mrs. Axne, Ms. Jackson Lee, Ms. Scanlon, and Ms. Adams) submitted the following resolution; which was referred to the Committee on Energy and Commerce

RESOLUTION

Recognizing women's cardiovascular health as a critical health care priority that affects every State and contributes to increased health care costs, and promoting the necessity of increased awareness of and education on the symptoms for heart disease among women, gender-specific cardiovascular disease research, and policy action to alleviate the risks of heart disease among women.

Whereas heart disease is the number one killer of women in the United States;

- Whereas heart disease accounts for the deaths of 400,000 women each year or 1,080 each day;
- Whereas one in five women die of heart disease or stroke;
- Whereas the symptoms of heart disease and heart attack among women are different from those among men;
- Whereas the maternal mortality rate in the United States is rising with more than 700 women dying from pregnancy-related conditions each year, and cardiac disease and stroke, the leading cause of pregnancy-related deaths in the United States, is responsible for approximately 34 percent of these losses;
- Whereas unrecognized symptoms and inadequate treatment of cardiovascular disease among women contribute to the increasing costs to the United States health care system, which, if left unaddressed, are projected to surpass \$1 trillion by 2035;
- Whereas heart attack symptoms among women are not typically recognized and can be as subtle as fatigue, jaw pain, shortness of breath, backache, and indigestion;
- Whereas half of all women experiencing heart attacks display none of the typically recognized male symptoms;
- Whereas 64 percent of women who die of coronary heart disease show no prior typically recognized symptoms;
- Whereas women are 50 percent more likely to receive an incorrect diagnosis following a heart attack;
- Whereas despite gender differences in physiology and the manifestation of cardiovascular disease, women comprise only 36 percent of participants in cardiovascular disease studies that enroll both men and women; and

Whereas even when considering all cardiovascular disease-related studies, including single-sex studies, women still comprise only 38 percent of participants: Now, therefore, be it

- 1 Resolved, That the House of Representatives— 2 (1) recognizes the vital importance of decreas-3 ing cardiovascular disease among women; 4 (2) promotes the necessity of raising awareness 5 of the preventable ubiquity of cardiovascular mor-6 tality among women, and urges a comprehensive 7 public awareness initiative that establishes best prac-8 tices for identifying and treating cardiovascular inci-9 dents in women, specifically; 10 (3) supports efforts to educate women, men, pa-11 tients, and physicians about the critical differences 12 of cardiovascular disease symptoms between women 13 and men; 14 (4) supports the promotion of gender-specific 15 cardiovascular health research, prevention, 16 treatment, because— 17 (A) there is a material difference in the 18 way women present with cardiovascular or 19 heart attack symptoms; and 20 (B) gender-specific cardiovascular research 21
 - is essential to driving successful positive outcomes in the reduction of mortality rates;
